PROFESSIONAL SUMMARY

Senior Java Backend Engineer with 7.4 years of experience building scalable, distributed backend systems using Java 17, Spring Boot, Kafka, and AWS Serverless. Proven track record of improving system performance by 30%, reducing cloud costs by 25%, and operating high-volume data pipelines processing millions of records. Strong in event-driven microservices, fault-tolerant messaging, and end-to-end production ownership.

CORE SKILLS

- **Backend:** Java 17, Spring Boot, REST APIs, Hibernate, JPA
- **Architecture & Patterns:** Microservices, Event-Driven Architecture, Design Patterns
- **Messaging:** Apache Kafka
- **Cloud & Serverless:** AWS Lambda, S3, IAM, VPC, CloudFormation
- **Databases:** PostgreSQL, MySQL, Oracle DB
- **DevOps & Tools:** CI/CD, Git, Production Support
- **Security & Auth:** Spring Security, JWT, Role-Based Access Control, OAuth2 basics

PROFESSIONAL EXPERIENCE

Senior Java Backend Engineer — Guru Gowri Krupa Technologies Pvt Ltd | *Apr 2022 – Aug 2026*

• Designed and developed event-driven microservices using Java 17 and AWS Lambda, processing high-volume data through Kafka-based asynchronous communication.
• Improved Kafka consumer throughput by 30% by optimizing consumer group configurations and parallel processing.
• Implemented retry mechanisms and dead-letter queues to ensure fault-tolerant message processing.
• Migrated legacy workflows to AWS Lambda, reducing cloud infrastructure costs by 25%.
• Optimized PostgreSQL queries and indexing, improving system response times by 35%.
• Operated and monitored high-volume cloud data pipelines processing millions of records under strict SLAs.
• Built and maintained automated CI/CD pipelines using GitHub Actions for build and zero-downtime deployment.
• Acted as backend owner for multiple core services and mentored junior software engineers.

Software Engineer — Ivy Comptech | *Nov 2021 – Apr 2022*

• Developed high-throughput RESTful APIs for mission-critical financial transaction systems using Java and Spring Boot.
• Integrated backend services with Oracle DB ensuring strict ACID compliance and transaction integrity.
• Provided active tier-3 production support and resolved critical backend production incidents.

Full Stack Developer — Vupadhi Techno Services Pvt Ltd | *Apr 2019 – Nov 2021*

• Designed and implemented 100+ Spring MVC endpoints using Java for nationwide government e-Tender platforms.
• Built and maintained JPA domain models supporting large-scale, concurrent bidding workflows.
• Resolved critical production bugs within 2 hours, minimizing system downtime.
• Maintained high system availability for platforms used concurrently by thousands of bidders across India.

EDUCATION

B.Tech in Computer Science & Engineering | 2014 – 2018

Nalla Malla Reddy Engineering College — Hyderabad, India
